Alesis hd24 fireport

This guide covers how to check your Alesis HD's OS, as well as the proper procedure for updating using MIDI or Ethernet. Table of Contents Download the latest OS To obtain the latest OS for your HD24, visit the product page and select the Docs and Downloads tab. Knowing When to Update the OS There are two reset operations that will solve any virtually any non-hardware related issue. Try these before considering reloading the firmware or having the unit serviced. Software Reset: Power up the unit while holding down the Play and Record buttons. Hardware Reset: Power up the unit while holding down the 9 and 20 buttons. What OS is installed on my HD24? Press UTILITY repeatedly until Util15:Sys info is displayed on the screen Now press the YES (up arrow) button once. The currently installed OS will be displayed on the scree. For example: OS Ver: 1.20 Having the latest OS is important, especially when information is being swapped between multiple HD24 units, or to ensure compatibility with Alesis Fireport. Hard drives containing songs and projects recorded on an HD24 using an older OS will not be recognized by the Alesis Fireport or the FST connect software that comes with it. The current OS uses a slightly different files system than older OS versions. If a drive containing Songs and Projects recorded on an HD24 using an older OS is inserted into an HD24 with the latest OS, the HD24 will offer to update the drive's file system. The file system update will allow compatibility with the new OS. While no data will be lost, once the drive is updated, it will work if returned to an HD24 with an older OS. Updating the OS The Operating System can be updated either via MIDI or Ethernet. Alesis strongly recommends updating via Ethernet. Updating via MIDI requires a computer with a MIDI interface, and software capable of transmitting MIDI SysEx files. It's important to note that if the update via MIDI fails to complete, the HD24 will be unusable until a successful update via MIDI can be completed. This risk is not present when updating via Ethernet. For this reason, updating via Ethernet is preferred. If the update fails, the process will be safely aborted, with no ill affects to the HD24 and you can simply try again. Updating the Alesis HD24 via MIDI You will need to download and install a SysEx program to send the OS to your machine. Mac OSX ♦ Windows Connect the MIDI output of your computer or USB MIDI interface to the MIDI IN of the HD24 Press the MIDI button until your reach page 3. Press the Yes(✓) button. The display will read: "Completely Erase Old Code? Y/N" Press the Yes(✓) button. The HD24's display will read: "Waiting for Software". Start sending software from the source device (computer, HD24, etc.) This process takes around 9 minutes over MIDI. Updating the Alesis HD24 via Ethernet First reinitialize the HD24 by powering up while holding down the Play and Record buttons. Then the latest HD24 1.21 update can be downloaded at www.alesis.com/hd24. When connecting your HD24 to your Windows PC's Ethernet port, you need to use a crossover cable. This looks the same as a regular Ethernet cable, but has a different internal wiring. A crossover cable will often have 'crossover' printed repeatedly along the length of the cable's vinyl jacket. This is not a typical cable for most people to own, and is usually purchased for a specific application or purpose. You can easily find these specialized cables at online retailers such as amazon.com by searching ethernet crossover cable. Note: connecting to a Macintosh uses a normal Ethernet cable. Also, avoid using a hub as this may make it harder to connect. Here is a update procedure for Windows: IMPORTANT: only attempt to update via ethernet by connecting your HD24 directly to your computer's ethernet port. Do not attempt through a router or any intermediate device. Go to www.download.com and download a free FTP client for the OS of the computer you will be using and install it, such as FTP Surfer. Go to the Alesis download site and download and unzip the updated HD24 version 1.21 software. On your computer, go to the Start Menu, then Control Panel, Double-click on Network Connection. Double-click on your Ethernet Connection, click on Properties and ensure Internet Protocol(TCP/IP) is present and checked. If not, then you must install it manually by clicking the Install tab. Double-click on Internet Protocol(TCP/IP) and choose Use this IP Address. Enter in the following: IP Address - 192.168.1.101 SubNet Mask - 255.255.255.0 Default Gateway - 192.168.1.101 Close all windows. Hook up an Ethernet cable from your computer to the HD24 and the HD24 into FTP server mode from the front panel assembly Utility menu. Open the FTP program your computer. you will be asked what you want your home page to be, type the IP address of the HD24 192.168.1.100 Ensure both user and and password are "anonymous" in your FTP program. Once connected to the HD24, drag and drop the new OS. The program will ask you if you want to replace the old version. Answer Yes and follow the onscreen steps to complete the upgrade. Alesis Technical Support and Warranty Service Whether you are a customer or dealer, if you already own an Alesis product, or if you just have pre-sales questions, the Alesis technical support team is available to help! Visit the link below to connect with any of the following support options: online community support, phone support, email support. Alesis HD24 transfer Problem The Fireport I've been using for the past few years is no longer working, I just bought a new Fireport and it doesn't work either. Green lights and all, but neither the Alesis software or HD24 Tools software won't see the drive. I've tried 4 different drives, 2 different Fireports, and 2- PC's XP-SP3, 2- Mac's OS-X #% In the heat of battle doing sessions in Nashville, I may be forced to do the Ethernet Transfer ... anybody here with experience??? Looks like I could plug my Ethernet cable directly into my computer or into my router. Any experience which is the easiest??? I have a 3rd Fireport on the way, but it's back ordered. Any help will greatly be appreciated. Russ Nashville "In Order To Predict The Future ... Create It" Page 1 Reference Manual... Page 2 100%... Introduction Welcome! Thank you for selecting the Alesis FirePort 1394™, the perfect complement to your Alesis Adat HD24 hard disk recorder. Since 1984, we've been designing and building creative tools for the audio community. We believe in our products, because we've heard the results that creative people like you achieve with them. Introduction About the FirePort 1394 and FST/Connect software The Alesis FirePort 1394 is designed to complement the ADAT HD24 hard disk recorder perfectly. It allows extremely fast and accurate transfers of audio data between an ADAT FST™ hard drive and your computer by using industry-standard IEEE 1394 connections (also known as FireWire). Page 7 Provides multiple file transfer formats The FST/Connect software allows you to move data to and from an FST hard drive in the four most widely used formats: wav (Wave), aif (Audio Interchange File), sd2 (Sound Designer™ 2), and dig/sd (Sound Designer 1). There is also an option to export tracks to the PC as 16-bit files. Introduction Key Features of the FirePort 1394 and FST/Connect software Lightning-fast file transfer over industry-standard FireWire connections. Transfer anywhere from 1 to 24 tracks of audio at one time between your FST drive and your computer. Supported audio file formats include .wav, .aif, .sd2 and .dig/.sd. How to Use This Manual This manual is divided into the following sections describing the various functions and applications for the FirePort 1394 and FST/Connect. While it's a good idea to read through the entire manual once carefully, those having general knowledge about computer software and hardware should use the table of contents to look up specific functions. Page 10 Introduction This page intentionally left blank... Important Safety Instructions Important Safety Instructions (English) Safety symbols used in this product This symbol alerts the user that there are important operating and maintenance instructions in the literature accompanying this unit. This symbol warns the user of uninsulated voltage within the unit that can cause dangerous electric shocks. Page 12 Important Safety Instructions 12. Use only with a cart, stand, bracket, or table designed for use with professional audio or music equipment. In any installation, make sure that injury or damage will not result from cables pulling on the apparatus and its mounting. If a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over: Instructions de Sécurité Importantes (French) Symboles utilisés dans ce produit Ce symbole avertit l'utilisateur qu'il existe des instructions de fonctionnement et de maintenance dans la documentation jointe avec ce produit. Ce symbole avertit l'utilisateur de la présence d'une tension non isolée à l'intérieur de l'appareil pouvant engendrer des chocs électriques. Page 14 Important Safety Instructions 12. N'utilisez qu'avec un stand, ou table conçus pour l'utilisation d'audio professionnel ou instruments de musique. Dans toute installation, veillez de ne rien endommager à cause de câbles qui tirent sur des appareils et leur support. 13. Débranchez l'appareil lors d'un orage ou lorsqu'il n'est pas utilisé... Lesen Sie bitte die folgende Sicherheitshinweise (German) Sicherheit Symbole verwendet in diesem Produkt Dieses Symbol alarmiert den Benutzer, daß es wichtige Funktionen und Wartung Anweisungen in der Literatur gibt, die diese Maßeinheit begleitet. Dieses Symbol warnt den Benutzer der nicht isolierten Spannung innerhalb der Maßeinheit, die gefährliche elektrische Schläge verursachen kann. Page 16 Important Safety Instructions 12. Verwenden Sie ausschließlich Wagen, Ständer, oder Tische, die speziell für professionelle Audio- und Musikinstrumente geeignet sind. Achten Sie immer darauf, daß die jeweiligen Geräte sicher installiert sind, um Schäden und Verletzungen zu vermeiden. Wenn Sie einen Rollwagen benutzen, achten Sie darauf, das dieser nicht umkippt, um Verletzungen auszuschließen. Important Safety Instructions CE Declaration Of Conformity See our website at: FCC Compliance Statement This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference and (2) this device must accept any interference received, including interference that may cause undesired operation. Page 18 Important Safety Instructions ... Getting Started Unpacking the FirePort 1394 In addition to this manual, you should find the following items inside the FirePort 1394's box: • The FirePort 1394 • Four bracket stands, each with raised nubs on one side. These serve as "feet" for your FST drive, for the sake of traction and air circulation. Getting Started Connecting/Disconnecting the FirePort 1394 The first thing to do is to attach the four bracket stands to the FST drive caddy, one to each corner, as illustrated below: These raise the FST drive off the table or desk slightly, which will help keep air circulating around the drive and prevent overheating during use. Page 21 Routine connections Once you have everything working, these are the steps to observe when connecting an FST drive to the FirePort 1394: Make sure the power switch on the FirePort 1394 is set to OFF. Connect the FST drive to the FirePort 1394. Turn the FirePort 1394's power switch to ON. Installing FST/Connect The brain behind the FirePort 1394's "brawn" is FST/Connect. This is a software program developed by Alesis, and you will find it on the CD-ROM that was in the box with the FirePort 1394. Installing FST/Connect is simple. Put the CD-ROM into your PC, navigate to the CD drive (usually the D drive), and locate the file called setup.exe. Operations The FST/Connect Main Window The main window of FST/Connect has four major subdivisions, each of which contains between two and nine functions. There are also five pull-down menus with additional functions. Everything you can do with FST/Connect happens from here, so let's go through the windows and menus one by one. Operations To get the FSP reading for recording time available at 96 kHz, click anywhere in the window to the right of the "At" box and select the number 96 from the menu. If your 48k song has 16 or 24 tracks, the number in the "For"... The Song window As stated earlier, each Project can hold up to 99 songs if you're using file system 1.10. The Song window is the one that allows you to choose the current Song within the Project. But it also contains five other fields that hold important information: the number of tracks in the song (also called "track depth"), the length of the Song, its sample rate and word length (sometimes referred to as... Operations The Transfer window Occupying over half of the main window, the Transfer window sports a majority of the features found in FST/Connect. It is here you will select which tracks to send which way, decide where they will wind up, and determine what their format will be when they get there. Page 27 To switch between the two tabs, click on one or the other with the cursor, or use the Left and Right cursor keys. You'll notice that as the tabs change, the button below the Preview box will change automatically from Export to Import or vice versa. The Directory window &... Operations If you have a single track selected, you can listen to it through your computer's sound card. It doesn't matter whether the file is on the FST drive or on your PC's hard drive; if the file shows up in the Track list, it can be previewed. adat FST When this is the selected Transfer tab, the Format buttons tell FST/Connect which of the four possible audio file types you want the exported FST tracks to become as they are transferred to your PC's hard drive. We have given you these four options because they are the most widely used in audio editing platforms. Operations Drive There are five options here: Switch between multiple FirePort 1394 systems Select Completely erase or format an FST drive Format Convert 1.0 FST drives to 1.10, leaving data intact. Upgrade This option is grayed out if the FST drive is 1.10. Properties View FST drive model, size, and give it a name Quits FST/Connect Exit... Essentials of Exporting and Importing There are still some very important things to cover regarding exporting and importing. They are mostly related to the differences in the ways files are handled by PC and Macintosh computers. You probably won't have to do anything special to WAV and AIFF files, but the other two formats require a little more effort on your part. Operations Importing SD2 files from a Macintosh application Once you are done editing the audio file on the Macintosh, here is what to do in order to get the resultant file back into the PC: Inside the Macintosh, drop the file onto the MacBinary II+ icon. Page 33 Other notes about importing Bringing files from a PC into an FST drive is similar in some ways to copying tracks between songs on an HD24. If the segment you are pasting fits within the destination song, then when the track is pasted the song length does not change. Page 34 Operations This page intentionally left blank... Applications In this chapter we've compiled some points of interest about FST/Connect. They are divided into two categories: Tips and Tricks, with some timesaving tips and practical uses for FST/Connect, and Useful Information, which offers details about the way FST/Connect is integrated into the Windows environment on your PC. Applications Window Navigation and Shortcuts As you work with FST/Connect's main window, you'll want to remember that there are a number of keystrokes and key combinations that can make FST/Connect even easier to use. The first thing to know is that you can jump from one window to the next by using the Tab key. Neither should you attempt to defragment the FST drive using any form of disk utility. The Alesis file system was designed to keep file fragmentation to the absolute minimum. Besides, the FST drive has a proprietary method of file organization that a third-party... Applications Starting and restarting FST/Connect and FirePort 1394 You may start and restart FST/Connect without turning off the power to the FirePort 1394. But if you want to turn its power off you should dismount the hard drive first using the taskbar tool, as described on page 19, and then turn off the FirePort 1394. Troubleshooting Troubleshooting Index Symptoms FST Drive contents don't show up in window/ "No Drive Communication" message in main window PC folder contents don't show up in window No output when auditioning tracks My audio editor won't open the FST file Cause FirePort wasn't powered down after HD was... Page 40 Troubleshooting This page intentionally left blank... For the most effective service, the purchaser should register the purchase on the ALESIS website at . During the warranty period ALESIS shall, at its sole and absolute option, either repair or replace free of charge any product that proves to be defective on inspection by ALESIS or its authorized service representative.
